

## Casas Facilities

Casas por Cristo has been operating in the Bisoño (western) suburb of Santiago, Dominican Republic for several years. Present facilities are experiencing crowding, so larger facilities are being planned north of Bisoño uphill from a new freeway entrance.

The present dormitory is a tall 4-level building (including the flat roof under solar panels). In this Google Earth view it appears as a tilted building (because of the satellite viewing angle) left of the yellow pin and under the black solar panels.

My only interior photos are of our arriving team in the dining area beside the kitchen.

Each day we stopped nearby at the warehouse to get equipment and tools for our construction work. Lumber, bags of cement, sand, and gravel, and the roof were already at the work site.

Warehouse entrance and lumber

White cartons of nails

Rebar for floor edges

Lumber and roof steel

Generators

Rebar for floor

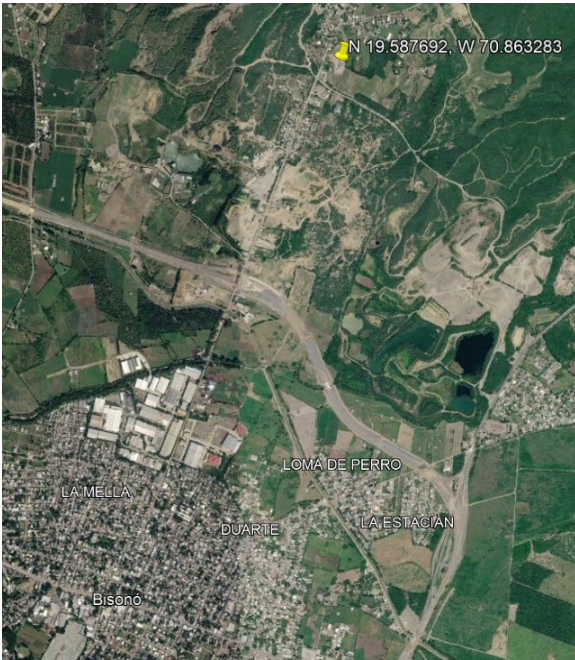

Nail cartons, windows, fiberboard

Doors

Loaded truck

New warehouse site at top, yellow pin

New site in 2022, trees, not flat

New site in 2026

As funds come in, a new Casas base of warehouse, dorms, kitchen, diningroom and pool will be built at this site north of Bisono and freeway entrance.

New base, warehouse conceptual drawing
